

BUSIA COUNTY EMR COVERAGE 13%

The MoH is prioritizing national roll-out of electronic medical records (EMR) to facilitate tracking the health system and health outcomes. Busia county has reached the target to implement EMRs that covers 80% of its HIV care and treatment population. Continued efforts should focus on data quality and ensuring the functionality of EMRs as per national standards. Further, there is need to work towards one EMR within the county to ease management and use.
